

Build a python code, Assume you get temperature and Humidity values(generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

```
#Temperature and humidity sensing alarm
```

```
import random
```

```
while(True):
```

```
    a=random.randint(10,100)
```

```
    b=random.randint(10,100)
```

```
    if(a>50 and b>100):
```

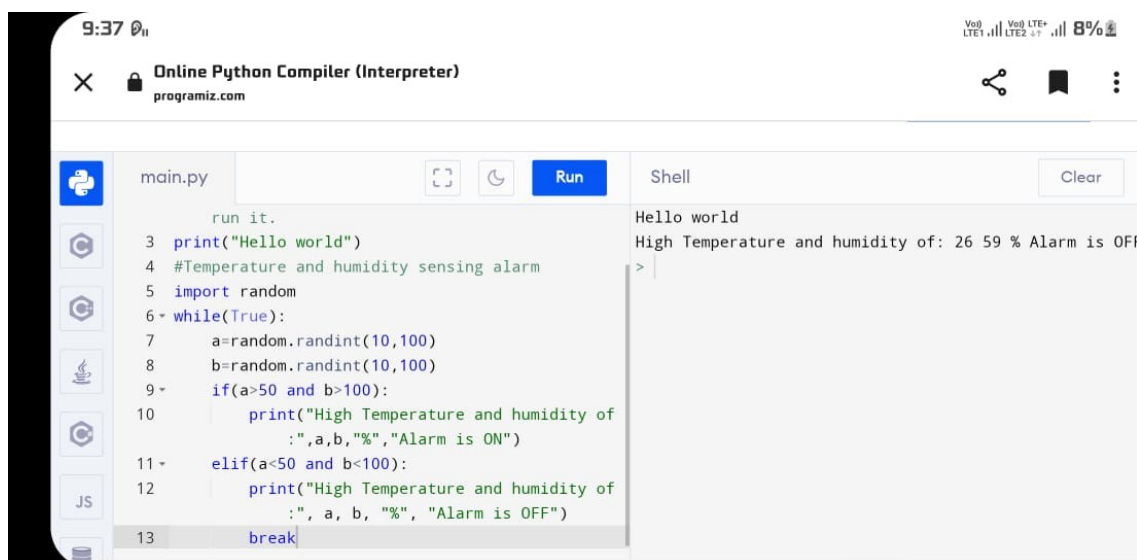

```
        print("High Temperature and humidity of:",a,b,"%","Alarm is ON")
```

```
    elif(a<50 and b<100):
```

```
        print("High Temperature and humidity of:", a, b, "%", "Alarm is OFF")
```

```
    break
```

Sample output:

The screenshot shows a web browser window with the title "Online Python Compiler (Interpreter)" and the URL "programiz.com". The interface includes a file explorer on the left with a file named "main.py". The main editor area contains the following Python code:

```
run it.
3 print("Hello world")
4 #Temperature and humidity sensing alarm
5 import random
6 while(True):
7     a=random.randint(10,100)
8     b=random.randint(10,100)
9     if(a>50 and b>100):
10         print("High Temperature and humidity of
              :",a,b,"%","Alarm is ON")
11     elif(a<50 and b<100):
12         print("High Temperature and humidity of
              :", a, b, "%", "Alarm is OFF")
13         break
```

The output area on the right, labeled "Shell", shows the following output:

```
Hello world
High Temperature and humidity of: 26 59 % Alarm is OFF
>
```
