<script>

    // Necessary for Fire OAuth to Function

    const fireBroadcastingChannel = new
BroadcastChannel('fireOAuthChannel');

    fireBroadcastingChannel.addEventListener('message', async
event => {

        let data = event.data

        /**

        * @typedef {Object<string, any>} Data

        * @property {boolean} success - Whether the login was
successful

        * @property {string} token - The data returned from the
login i.e. Fire Token

```

`*/`

**`// data.token` is the message sent from the
`fireOAuthChannel` after verification**

**`// data.success` is a boolean that indicates whether the
verification was successful**

`// data.token` is the fire token

`// What to do with the Fire Token?`

**`// * Fire Token` is an unique token which uniquely identifies
the user who authorized your login attempt with Fire**

`// * You` can use this token **ONLY ONCE as it will be
destroyed after the first use**

`// 1.` Send the fire token to the Fire Server to verify the user

`// - You` can do that client sided or server sided

**`// - You` need to send a POST Request to the Fire Server
with the fire token**

`// at the URL:` `http://localhost:3003/api/tokens/verify`

**`// - The Fire Server` will verify the fire token and return a
response**

`// - If the verification` was successful - **CODE (200), the Fire
Server will return a response with the user's data**

// - If the verification was unsuccessful - CODE (400) or CODE (401), the Fire Server will return a response with an error 'message'

// - You can use the data returned from the Fire Server to create a new user in your database

// This example will send the token to Fire Servers and console.log the response

console.log("%c" + `Fire Token: \${data.token}`, `color: #f1c40f; font-weight: bold;`);

**const response = await
fetch('https://fire.adaptable.app/api/tokens/verify', {
 method: 'POST',
 headers: {
 'Content-Type': 'application/json'
 },
 body: JSON.stringify({
 token: data.token
 })
})

// get the response

const responseData = await response.json()

// console.log the response

console.log(responseData)

await localforage.setItem('userData', {...responseData, isFire:
true})**

```

// Adding the user data to the user Database
let database = await localforage.getItem("userDatabase")
if (database == null) {
    database = []
}
database.push(responseData)
await localforage.setItem("userDatabase", database)
// redirect to the home page

```

OUTPUT:

The screenshot shows a web form titled "Login to Continue". It contains five input fields: "First Name", "Last Name", "User Name", "Email", and "Password". To the right of the "Password" field is a "Sign Up" button. Below the "First Name" field is a button labeled "Login with SAFETY". At the bottom of the form, there is a link that reads "Already have an Account? Login ↗".
